record BLS 60

Touchless switch BLS 60 reduces the spread of germs

Hygienic and user-friendly

Bacteria and viruses are mostly passed on via the hands. A door handle that turns into a germ spreader is a problem for companies, especially in the hygiene sector. The unpleasant bacteria adhere to many everyday things such as smartphones, shopping trolleys, light switches or door handles.

Non-contact buttons are the ideal solution for hospitals, medical practices, restaurants and food processing industry. Simply approach the switch and the automatic door opens when your hands are busy with carrying objects or typing a message on your smartphone.

In addition to operating the door easily, the record BLS 60 guarantees hygienic handling, as there is never any contact between skin and object.

The sensor is hidden behind the dark 60 x 60mm front panel. Its activation is indicated by a red LED.

Applications

Æ More stringent hygienic requirements for opening doors in hospitals; e.g. operating theatres, laboratories, patient rooms.
Æ Gesture control of automatic doors in residential and nursing facilities, also for persons with limited mobility.
Æ Automatic doors in sanitary areas to reduce the spreading of germs and dangerous pathogens.
Æ Conscious door opening for service personnel between the guest zone and the kitchen in restaurants or for employees in the food processing industry.

Features

Æ Scanning range adjustable between 15 and 80cm
Æ Floating relay changeover contact to control door drives
Æ Interchangeable front panel with application-related pictograms.

The BLS 60-REL can easily and quickly be installed in surface- or flush-mounted versions of commonly used switch systems. The switch is ready for operation as soon as you have connected it electrically to the door control and set the desired scanning range.

Touchless switch BLS 60 reduces the spread of germs

Technical data

- Scanning distance (with white paper): 15…80cm
- Glass panel dimension: 60 x 60mm
- Supply voltage: 10…30 VDC
- Power consumption: 0.3 W
- Relay output, contact rating: max. 1 A (30 VDC)
- Function indicator when active: red LED
- Protection rating (DIN EN 60529): IP 54
- Temperature range: -20…+55 °C
- Humidity range: up to 85% rel., non-condensing

Versions

Touchless switch BLS 60-REL

- Opto-electronic proximity switch with relay actuation
- Operation: touchless
- Button size: Standard electrical size 88 x 88mm
- Supply voltage: 10-30 VDC
- Range: 15-80cm

Glass panel «Hand», without/with record Logo

Installation variants

- Alternatively surface mounting or flush mounting possible
