

Ferrari Maserati Waterloo

Case Study

In May 2017 the new fit out at Ferrari Maserati Sydney showroom in Waterloo was completed by Reitsma Constructions and two automatic sliding door operators were installed by record Automatic Doors, working with Grange Glass & Aluminium.

The main pedestrian entrance has a record STA 20 bi-parting sliding door operator while for the movement of vehicles into the showroom our record TSA 22 heavy duty telescopic sliding door operator was installed. The sliding door panels weigh 170kg each and provides a clear opening of 2580mm.

Despite being 1340mm wide by 3200mm high frameless glass panels the high quality TSA 22 operator, using Australian extruded aluminium profiles and Swiss manufactured electrical components offers very smooth, quiet and reliable operation.
