

The Platform at Royal Randwick

Case Study

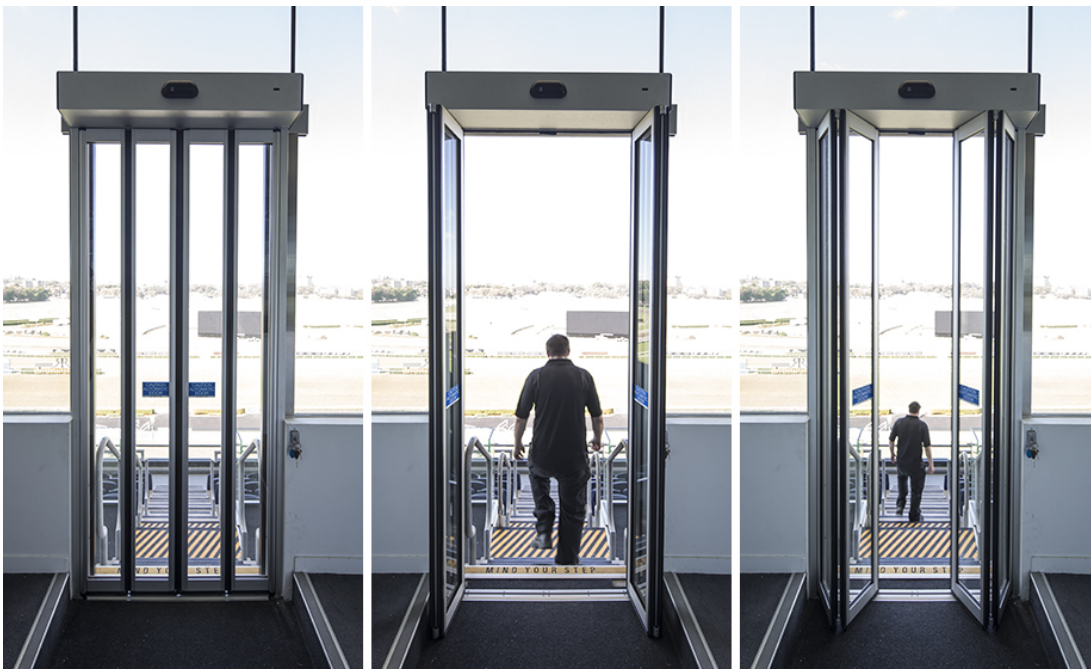

The Platforms at Royal Randwick is the outdoor viewing area on Level 3 of the Queen Elizabeth II Grandstand however in high wind conditions, the existing automatic swing doors providing access to this area were proving to be problematic so record Automatic Doors was engaged to provide an alternative door solution.

The narrow passageway of this particular door opening and the internal floor levels adjacent meant upgrading to an automatic sliding door would not be possible so instead a new bi-folding door entrance was designed to provide fast acting door automatic operation, whilst minimising disruption to the surrounding glass facade and internal floor finishes.

To support the record FTA 20 operator it is bolted through the existing glass highlights at the head while the side framing is clamped onto the existing sidelight glazing with black aluminium plates.
