

Flip Flow single

Case Study

record Flip Flow products provide a high level of security for a wide range of applications where the flow of people needs to be controlled. The Flip Flow single is a user friendly, one-way traffic security system which delivers a high volume throughput, without jeopardizing controlled access. Doors can be designed to enable security at the highest level at access points with features such as security interlocks with video monitoring for single access only, personal identification at the entrance, or authentication inside the interlock. Security interlocks can also be designed with automatic swing or sliding doors.
